

## PHOTO FEATURE IN 'THE AEROPLANE'

The issue of The Aeroplane for June 20, 1947 included a centre spread of photographs of DHAeTS students. Peter Stokes kindly lent us his copy of this spread, reproduced here both as portions at original size and as a reduced complete image. Peter recollects this feature being prompted by the return to Stag Lane of that part of the School which had been dispersed during the war to Kingsbury and to Carlisle Road. The location of the two pictures of work on a Dove and on a Hercules engine is not known, but the rest were taken at Stag Lane. The captions are Peter's; can anyone add to them?

*Roger de Mercado, May 2012*

October 2012. Ken Watkins adds: "The turbanned chap is Manmohan Singh Sal, a contemporary of mine at Sherrards in 1946."

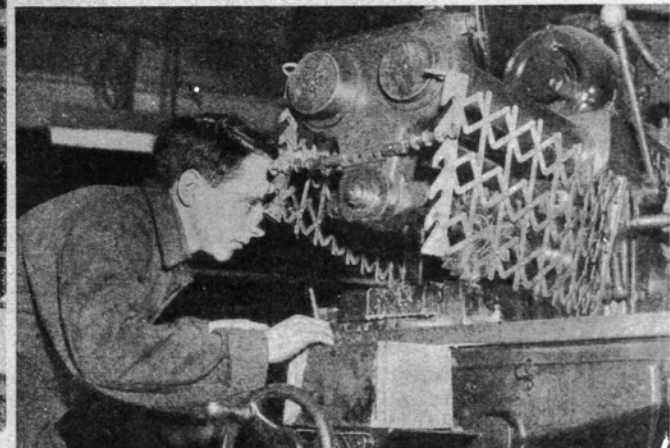

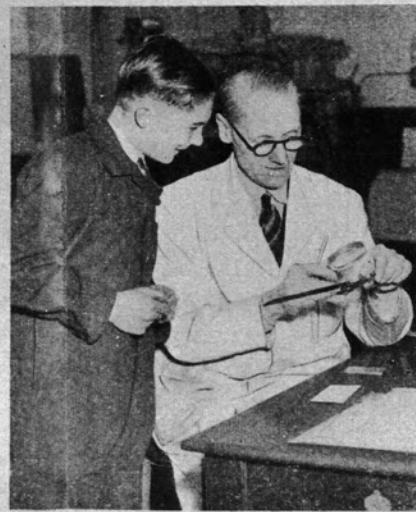

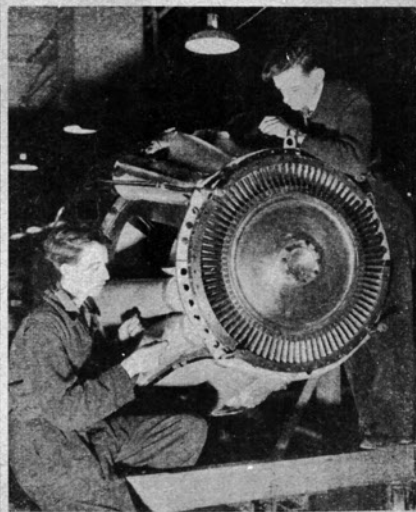

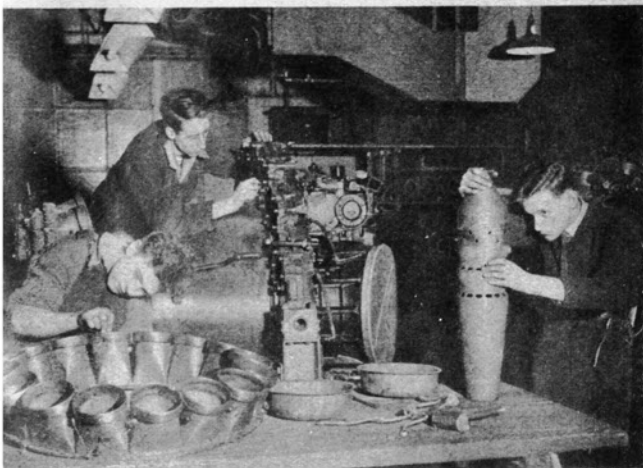

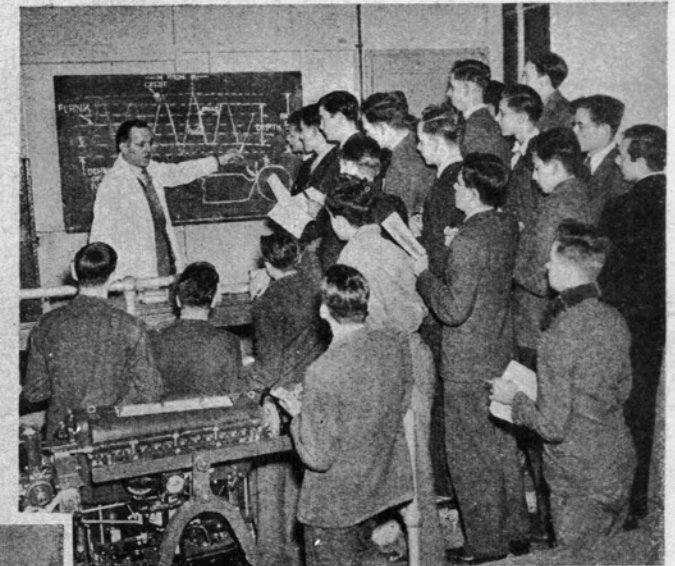

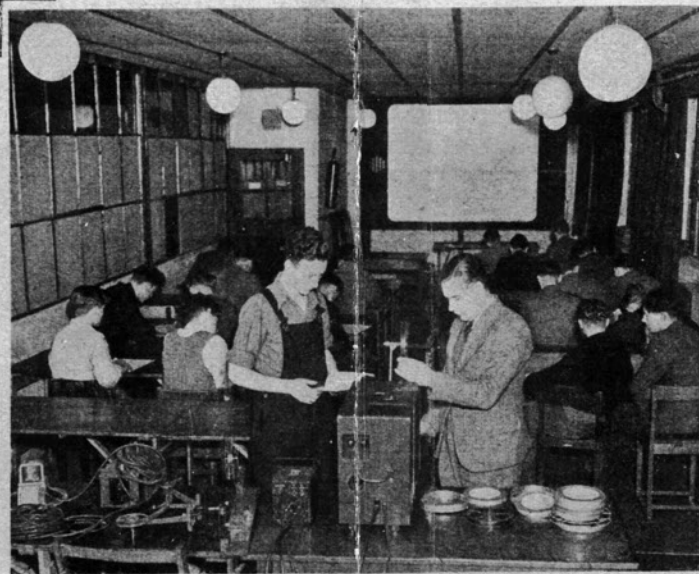

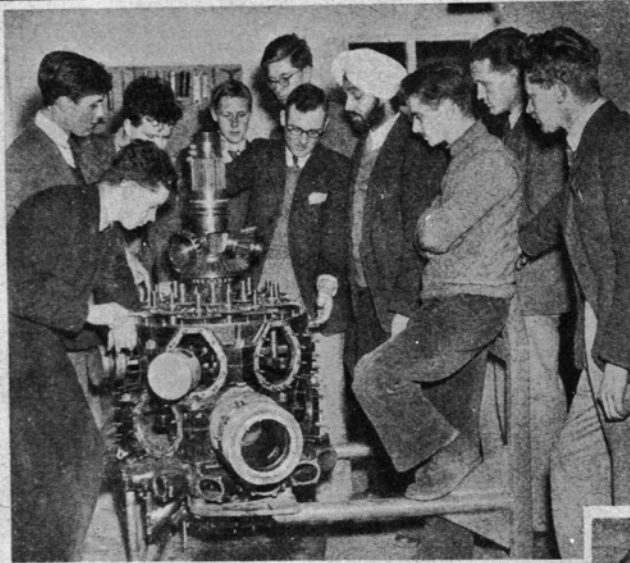

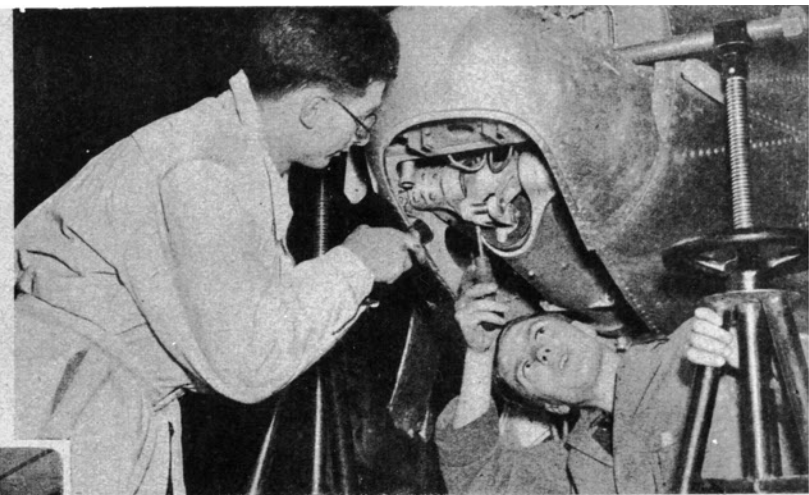

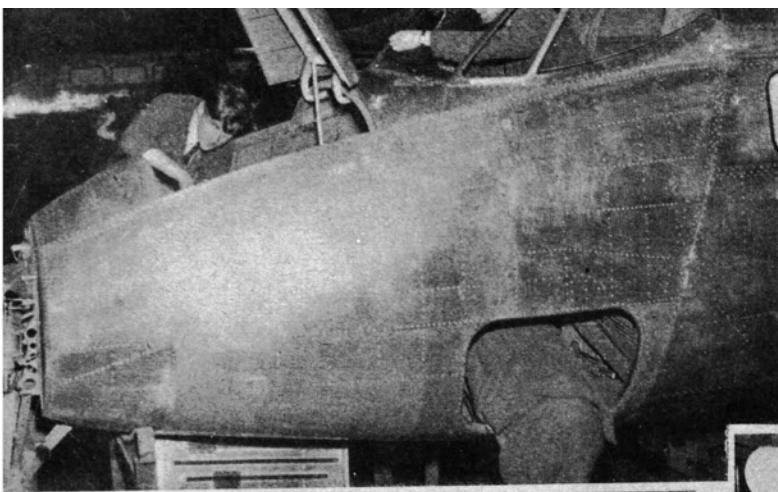

Bill Young setting up a projector, probably for the showing for the umpteenth time of the Tacoma Bridge disaster.

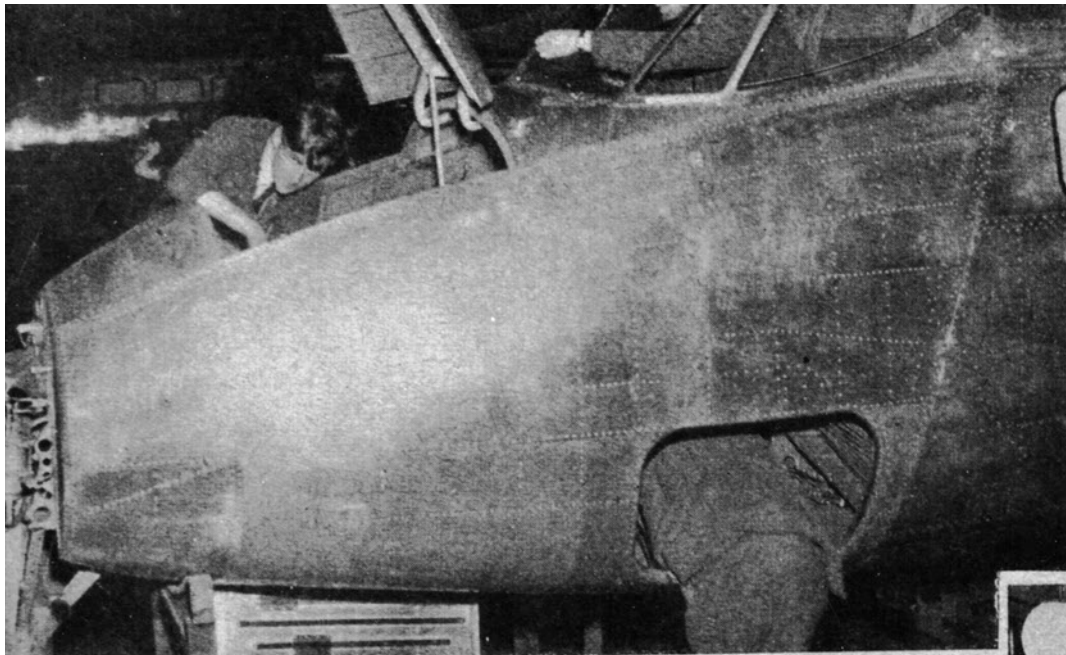

## Training the Next Generation

FOR the expanding technical and mechanical progress of the science of aeronautics, a steady inflow of keen, well-trained young engineers is essential. The demand is insistent and the required standard is high. Only through the medium of well-equipped, well-staffed and well-directed training schools can this demand be satisfied.

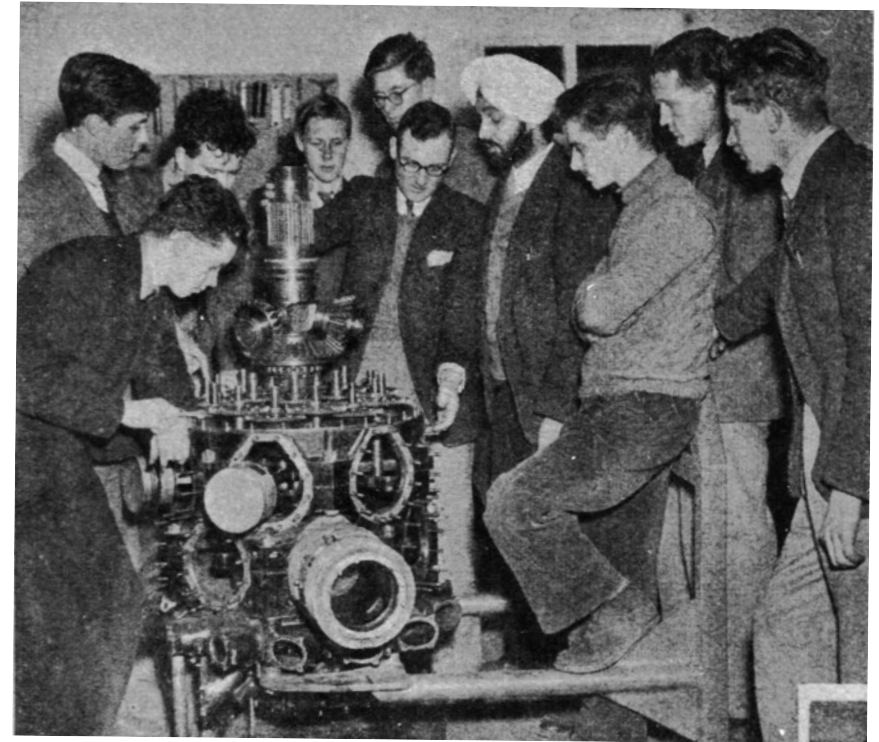

The de Havilland Aeronautical Technical School is one of several similar establishments and is renowned throughout the World—not only for the famous name it bears, but for the excellence of its products. These photographs of the activities of its students need no description—they tell their own story.

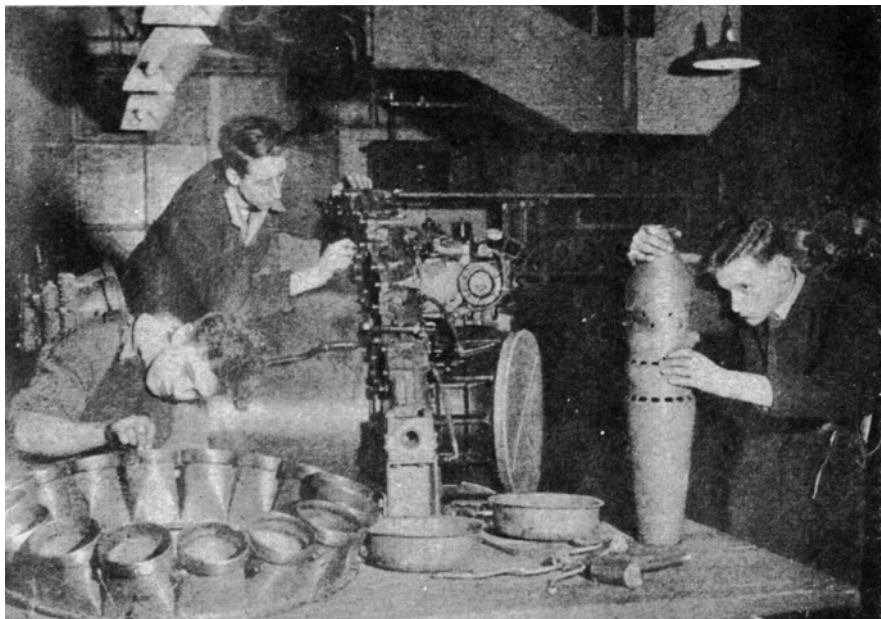

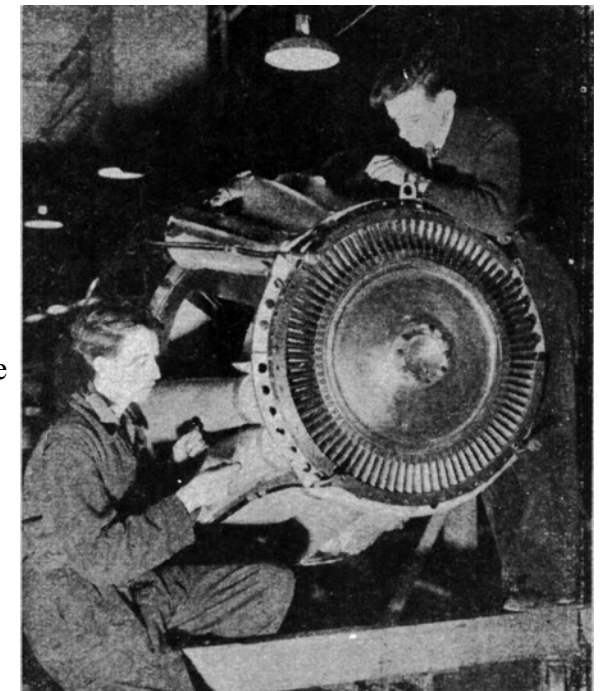

Working on Dove.

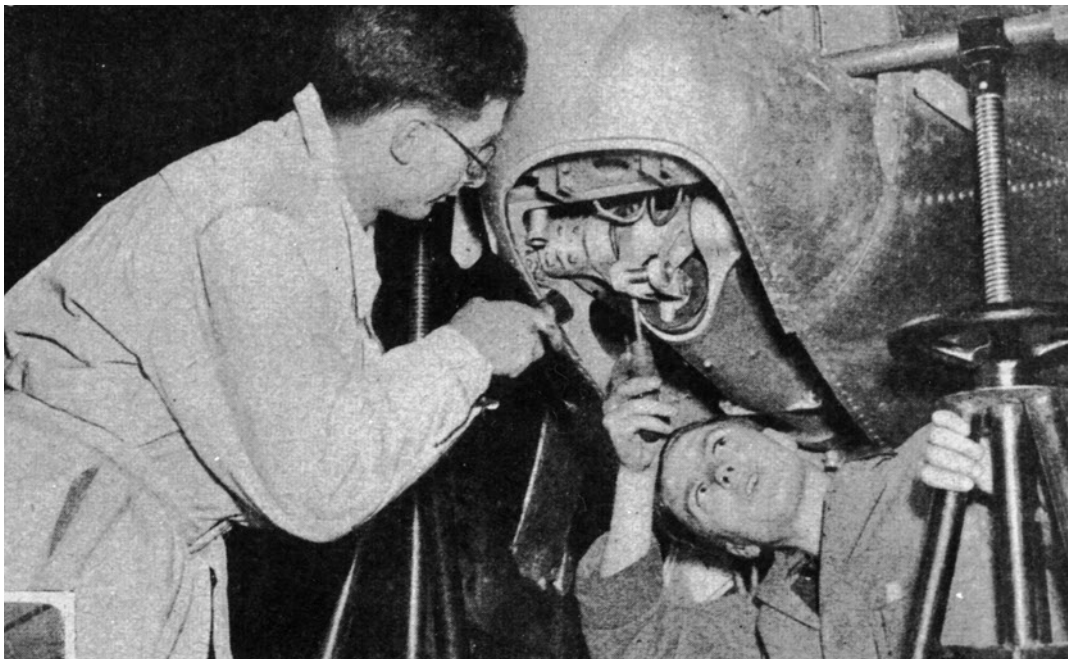

Mature students being instructed on Hercules engine. Student with turban is Manmohan Singh Sal.
